

1. Open a Chrome browser page
2. Type "chrome://flags" in browser
3. In the search type "SameSite by default cookies"

4. Click on the Default drop down menu
5. Click Disabled
6. Click Relaunch
7. Close out Google Chrome and reopen.

The screenshot shows the Chrome Experiments page with the search bar containing "SameSite by default cookies". The "Available" tab is selected. The first experiment, "SameSite by default cookies", is highlighted. Its description states: "Treat cookies that don't specify a SameSite attribute as if they were SameSite=Lax. Sites must specify SameSite=None in order to enable third-party usage. – Mac, Windows, Linux, Chrome OS, Android". The link "#same-site-by-default-cookies" is provided. The dropdown menu for this flag is open, showing "Default", "Enabled", and "Disabled" (selected). The second experiment, "Cookies without SameSite must be secure", is also visible. Its description states: "If enabled, cookies without SameSite restrictions must also be Secure. If a cookie without SameSite restrictions is set without the Secure attribute, it will be rejected. This flag only has an effect if 'SameSite by default cookies' is also enabled. – Mac, Windows, Linux, Chrome OS, Android". The link "#cookies-without-same-site-must-be-secure" is provided. At the bottom, a message says "Your changes will take effect the next time you relaunch Google Chrome." and a blue "Relaunch" button is visible.
